GOOD ROUND SUPPLY

Will your golf simulator fit your room?

Record the clear space before choosing a net, screen, enclosure, or launch monitor. Use one unit throughout. This worksheet helps you collect measurements, it does not certify fit or swing clearance.

Room location and date

Units, feet and inches or centimeters

1. Measure the usable space

Lowest clear height above the finished hitting surface

Hitting surface height above the floor

Usable width after cabinets, posts, and doors

Lowest beam, light, duct, or garage track

Usable depth from screen wall to rear obstruction

Doors, windows, vehicles, or other exposed areas

> **A frame fitting is only the first check.** Record each golfer and intended longest club. Check slow swings without a ball at the marked hitting position. A taller or smaller net does not create more swing space.

2. Sketch the room from above

Mark the proposed screen, ball position, swing area, launch monitor, projector, access route, and obstructions. Record the height of anything overhead.

Golfer height, handedness, and longest club

Other golfers and handedness

GOOD ROUND SUPPLY

Check the equipment. Then build the shopping list.

3. Map the depth and mounting requirements

Clearance behind screen, exact product requirement

Rear swing space and access route

Screen to ball distance, exact product requirement

Projector throw, location, and swing clearance

Launch monitor placement and tracking space

Overhead monitor mounting height, if applicable

4. Manufacturer room examples

Net Return publishes these starting room dimensions. They are not universal minimums. The golfer, club, hitting surface, accessories, and chosen launch monitor can need more space.

Enclosure foundation	Height × width × depth
Simulator Bay 8	9 ft × 10 ft × 14 ft
Simulator Bay 10	9 ft × 12 ft × 14 ft
Simulator Bay 12	9 ft × 14 ft × 14 ft

Manufacturer source checked October 9, 2026: Net Return Simulator Bay room plans. Some launch monitors need room depth up to 22 ft. Check current instructions for your exact products.

5. What is already owned, and what is missing?

- ☐ Net, screen, or enclosure, including the matching protection
- ☐ Hitting surface and stable stance area
- ☐ Launch monitor and required tracking accessories
- ☐ Projector or display, mounts, cables, and power
- ☐ Compatible computer or device and simulation software
- ☐ Delivery, assembly, access, and any room work

Questions to resolve before ordering

Next step: Compare your measurements with each product's current installation instructions, then explore the room planner. If anything is unclear, send us your measurements for a setup check.
